Lightroom has been one of the world's leading creative editing applications for many years, and the second generation version released in 2012 is widely regarded as a creative powerhouse. In fact, Lightroom has been ranked as the #1 photo editing application by Macworld magazine. Generally speaking, you can do everything at a minimum level that you need to do with your photos if you're working with raw images. For many creative users this is more than enough, and it can be a lot cheaper to use Lightroom or Photoshop than Alien Skin Exposure's starting price. However, if you need to do more complex processes to your images, the more intuitive workflow of Alien Skin Exposure may be a better option. In addition, Lightroom is limited to Apple OS X users only. If you're a Windows OS user who uses Alien Skin Exposure, then this isn't a limitation for you. Digital Photography Review recently reviewed Alien Skin Exposure and had the following to say: "With a focus on raw processing and image editing rather than cataloguing and organizing your images, Alien Skin's programs may not match up to those from Adobe or Apple but they allow those starting out in photography or experienced pros looking for some alternative software options new ways to explore their creativity.
